Green Village and Town Construction in China Xiaoming Wang

2021-05-27 By means of multidisciplinary research on urban and rural planning, construction engineering, environmental engineering and engineering sociology, this book conducts pioneering research on the construction theory, construction methods, evaluation technology and application of demonstration projects in China's green villages and towns. The book is divided into three parts and eleven chapters. Part I is about the theory and development of green village and town construction, including the theory and innovation, the evolution and development, the patterns and mechanisms, and the community of green village and town construction. Part II is about the planning and construction methods of green villages and towns, including the plan compilation, the environmental infrastructure construction, and the construction and renovation of green buildings in villages and towns. Part III is about the evaluation of the planning and construction of green villages and towns, including the evaluation of plans, the evaluation of environmental infrastructure construction, the evaluation of green building construction, and the comprehensive evaluation of the planning and construction of green villages and towns. Today, 564 million farmers live in 28,500 towns and 2.452 million villages in China. In 2018 alone, 820 million m² of new houses were built in rural areas. This proves that China's green village and town construction has great significance and can provide enlightenment to developing countries and even to the world. The book describes new theories, new perspectives and new methods of green village and town sustainable construction in China for overseas experts and readers.

Drinking Water Security in Rural India M. Dinesh Kumar 2022-02-07

This book highlights the multi-pronged strategy for achieving sustainable rural domestic water supply in India. It deepens the understanding of groundwater (predominant source of water supply) behaviour in response to natural processes in different geological settings, analyses the factors influencing the performance of water supply schemes; identifies the conditions under which groundwater-based drinking water sources become sustainable, suggests measures for improving the sustainability of drinking water wells in hard rock regions (covering 2/3rd of India's geographical area), presents a decision-making framework for planning rural water supply schemes in the country for ensuring long-term sustainability, and suggests physical strategies and policy measures for achieving them. The analyses for development and validation of various models that explain groundwater system behaviour and performance of rural water supply schemes are undertaken for different geological settings in Maharashtra, as the state represents a microcosm of the various hydrological, topographical, and geohydrological conditions encountered in the country. The final analysis for proposing nation-wide strategies considers the various hydrological, geological, geohydrological, and topographical and climatic settings and groundwater contamination and pollution in the country.

Effective Demand for Rural Water Supply in South Africa: Technical and Financial Implications of Designing to Meet Demand Michael Webster

2000-01-15 This book investigates the effective demand for rural water supply in South Africa, considering the application of a demand-responsive approach in order to improve project sustainability. The study was conducted as an Individual Research Project at WEDC in 1998, part of the author's MSc programme in Technology and Management for Rural Development.

Community Management of Rural Water Supply Paul Hutchings

2017-07-14 The supply of reliable and safe water is a key challenge for developing countries, particularly India. Community management has long been the declared model for rural water supply and is recognised to be critical for its implementation and success. Based on 20 detailed successful case studies from across India, this book outlines future rural water supply approaches for all lower-income countries as they start to follow India on the economic growth (and subsequent service levels) transition. The case studies cover state-level wealth varying from US\$2,600 to US\$10,000 GDP per person and a mix of gravity flow, single village and multi-village groundwater and surface water schemes. The research reported covers 17 states and surveys of 2,400 households. Together, they provide a spread of cases directly relevant to policy-makers in lower-income economies planning to upgrade the quality and sustainability of rural water supply to meet the Sustainable Development Goals, particularly in the context of economic growth.

Planning, Housing and Infrastructure for Smart Villages Hemanta Doloi 2018-12-07 Some 7.3 billion people currently live on the planet. Of these, 3.4 billion live in rural areas. In just a few regions—Latin America, the Middle East and North Africa—less than 50 per cent of poverty is now located in rural areas. But for the rest of the world's regions between 55 per cent and 80 per cent of the poor continue to live in the countryside. Progress is being made, but much of the knowhow needed is not disseminated outside of a small coterie of professionals who work in

the area. With urban development attracting a great deal of attention lately, poorer rural areas deserve the same and new knowledge for empowerment of rural communities is urgently needed. This book provides an overview of current thinking and practices that have emerged over the last thirty years for uplifting rural communities in developing economies. Drawing on a body of knowledge across a spectrum of relevant disciplines, this book provides a range of innovative ideas for rural planning, housing and infrastructure development. Governments in many emerging economies, where rural poverty is often most acute, have attempted to improve livelihoods. Approaches and techniques that have been used for urban development are often not applicable to rural communities. Studies show that money allocated for rural development is often not effectively spent due to distance, lack of infrastructure, lack of education, poverty and other factors. Meanwhile, the gap in development between the city and country continues to grow, sometimes leading to social and political instability, in both developing and developed countries. This book seeks to provide a guidebook for meeting such challenges. Through in-depth enquiry of global practices and thinking about rural development, and selected case studies, the authors argue that careful consideration must be given to incorporating issues of resilience, resourcefulness and the involvement of communities at grassroots levels in realising the transformation of rural settlements into Smart Villages.

CHINA AND THE WORLD BANK: PROMOTING CAPACITY

DEVELOPMENT SHIQING XIE 2020-11-27 The book China and the World Bank: Promoting Capacity Development summarizes the experience of China's capacity development under the support of the World Bank through the detailed analysis of China's 50 loan projects. Professor Yifu Lin, former chief economist and senior vice president of the World Bank wrote the foreword of the book. And he recommends the book as filling the gap of the research field in China's capacity development under the help of the World Bank. Capacity development usually refers to a dynamic and perfecting process, that the recipient countries' public sectors allocate and use available resources for promoting the development capacity to achieve the expected goals of economic and social development in a more effective, efficient, appropriate and sustainable way. This book is divided into five parts: the first part is "economic management and system reform", which discusses the experience of capacity development in economic reform, finance, taxation and industry sectors; the second part is "poverty alleviation and rural development", which analyzes the experience of capacity development in poverty alleviation and development, agricultural comprehensive development and rural water supply and environmental sanitation; the third part is "infrastructure", which refines water conservancy and hydropower experience in capacity development of expressways and urban transportation. The fourth part is "human development", which describes the experience of capacity development of basic education and medical health. The fifth part is "environmental protection", summarizing the experience of environmental management and urban water industry capacity development.

Country Profile on Housing and Land Management United Nations Economic Commission for Europe 2016-03-09 This Country Profile on Uzbekistan's housing and land management sectors, prepared at the request of the Government of Uzbekistan, is the 18th in the series. The Country Profile programme continues to focus on specific challenges or achievements in the housing and land management sectors that are particularly relevant to the country under review. In the case of Uzbekistan, these issues include housing policies and Government support measures for the construction of housing in rural areas; increased demand for housing of the fast-growing population; and depleted urban infrastructure inherited from the Soviet times.
