threatening process. In this Very Short Introduction, Aidan O'Donnell takes the reader on a tour through the whole of the modern anaesthetic practice. He begins by explaining general anaesthesia: what it is, how it is produced, and how it differs from natural sleep and other forms of unconsciousness. He goes on to consider the main categories of anaesthetic drugs, including anaesthetic vapours, intravenous agents, muscle relaxants, and analgesics, together with explanations of how they work and what their purpose is. Set against the historical background of anaesthetic and surgical practice, O'Donnell examines the large role anaesthetists play in specialised areas such as intensive care medicine, pain medicine, and childbirth; and finally, he considers the risks of anaesthesia, putting in to context that anaesthesia is a very safe process. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in

almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Anaesthesia Kate Cole-Adams
2017-05-29 Winner, 2017 Mark and Evette Moran Nib Literary Award
You know how it is when you go under. The jab, the countdown, the— —and then you wake. This book is about what happens in between. Until a hundred and seventy years ago many people chose death over the ordeal of surgery. Now hundreds of thousands undergo operations every day. Anaesthesia has made it possible. But how

much do we really know about what happens to us on the operating table? Can we hear what's going on around us? Is pain still pain if we are not awake to feel it, or don't remember it afterwards? How does the unconscious mind deal with the body's experience of being cut open and ransacked? And how can we help ourselves through it? Haunting, lyrical, sometimes shattering, *Anaesthesia* leavens science with personal experience to bring an intensely human curiosity to the unknowable realm beyond consciousness. What really happens to us when we are anaesthetised? By this I mean not what happens to the pinging, crackling apparatus of our nerves and spinal cords and brains, but what happens to us—to the person who is me or the person who is you—as doctors go about the messy business of slicing and delving within us? Kate Cole-Adams is a Melbourne writer and journalist. Her non-fiction work *Anaesthesia* won the Mark and Evette Moran Nib Literary

Her novel *Walking to the Moon* is also published by Text. 'Anaesthesia is mesmerising... This rich and thorough study looks more deeply into questions about the nature of consciousness than many of us who undergo an anaesthetic are likely, or willing, to ponder.' Australian Book Review 'A work of splendid richness and depth, driven by a curiosity so intense that it hazards at times the extreme boundaries of the sayable.' Helen Garner 'Kate Cole-Adams has been fascinated with our funny non-being during surgery for a long time, and *Anaesthesia* feels like a book that's taken over a decade to write, which it is. It also feels like you're having a decade's worth of conversations with a dogged, but generous and resourceful thinker, with someone (she is both a journalist and a novelist)

who can crack open a complex idea, and then run with it.'

Readings 'An obsessive, mystical, terrifying, and even phantasmagorical exploration of anaesthesia's shadowy terra incognita.' *The New Yorker* 'Remarkable in its attention to historical detail and quality of the primary

sources... practising anaesthetists should read what has become the single best account of our profession's most philosophically fragile constructs—consciousness and self... Cole-Adams has distilled and articulated the art of our profession.' *Anaesthesia Intensive Care* journal (published by Australian Society of Anaesthetists)

Cole-Adams has illuminated it in a memorable way. The book is a gift not of oblivion but of awareness.’ Inside Story ‘For the interested reader, it’s an outline of the science, with an emphasis on the unknown. For the practitioner, it’s a patient experience, eloquently expressed. There’s much more the anaesthesia than meets the eye, and this book provides a glimpse into the depths.’ Conversation ‘A fascinating mix

of historical background, moving—sometimes shocking—surgical stories, interviews with experts and case studies. Surprisingly, it seems relatively little is really known about exactly how effective and affective anaesthetic is. Despite that, I found this book an oddly reassuring study.’ North and South NZ ‘Kate Cole-Adams has written a book that defies familiar categories. It is a personal memoir, a history, a scientific study, and a philosophical enquiry into the unconscious, and by drawing all these strands together the author has delivered a masterpiece.’ Jamie Grant, head judge, Waverley Council Nib Literary Awards ‘This is a surprising delight of a book about the invention and use of anaesthetics, but it is also about the concept of consciousness. It is a book about the fear of death, the fear of a lack of control, the fear of an imminent operation, the way a life can be plagued by a general feeling of anxiety and how dreams play a part in

at Massachusetts General Hospital in 1846 to today's routine procedure that controls anxiety, memory formation, pain relief, and more, anesthesia has come a long way. But it remains one of the most extraordinary, unexplored corners of the medical world. In *Counting Backwards*, Dr. Henry Jay Przybylo—a pediatric anesthesiologist with more than thirty years of experience—delivers an unforgettable account of the procedure's daily dramas and fundamental mysteries. Przybylo has administered anesthesia more than 30,000 times in his career—erasing consciousness, denying memory, and immobilizing the body, and then reversing all of these effects—on newborn babies, screaming toddlers, sullen teenagers, even a gorilla. With compassion and candor, he weaves his experiences into an intimate exploration of the nature of consciousness, the politics of pain relief, and the wonder of modern medicine. Filled with intensity and humanity, with

moments of near-disaster, life-saving success, and simple grace, *Counting Backwards* is for anyone curious about what happens after we lose consciousness.

Anaesthesia Cyprian Mendonca, 2009-05-01 Winner of a HIGHLY COMMENDED AWARD in the Anaesthesia category of the 2010 BMA Medical Book Competition. This book comprises structured questions and answers that closely simulate the structured oral examination (SOE) format of The Royal College of Anaesthetists' final FRCA examination. The style of exam questions has changed over the years and this book matches the most recent changes in this updated exam. It consists of ten sets (chapters) of complete SOE papers. Each SOE set (chapter) includes one long case, three short cases and four different applied basic science topics (anatomy, physiology, pharmacology and clinical measurement). As this book is presented in the format of complete examination papers, it will enable candidates to assess their knowledge and skills. It will also assist trainers in setting up mock exams. With thorough revision of this book, trainees can confidently sit their exams.

The authors have been organising final FRCA viva courses for the past five years, running four exam preparation courses a year, attended by about 200 trainees each year. This book includes updated knowledge based on the syllabus and more recent questions asked in the FRCA examination. It is, therefore, essential study material for trainees and a great educational tool for trainers. This book will also help candidates all over the world to pass highly competitive postgraduate examinations in anaesthesia. It is an invaluable educational resource for all anaesthetists.
