**Hand-Book for the Ship's Medicine Chest** 1881

**Handbook for the Ship's Medicine Chest** United States Public Service 2013-09 This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 edition. Excerpt: ...SORT CHANCRE (CHANCROID). Soft chancre or chancroid is a virulent ulcer. It usually begins within twenty-four or thirty-six hours after exposure, first as a red spot, but rapidly developing into an ulcer covered with thick yellowish pus. The period of development is about three or four days. iSometimes a week elapses from the time of exposure to the development of the sore, and occasionally a period of incubation is as long as ten days. A sore appearing within a few days, or a week, or even as late as ten days after the exposure is usually regarded as a chancroid. But in practice this is not a safe rule, for the reason that many venereal sores are of a mixed character. A hard or syphilitic chancre contracted two or three weeks ago, makes its appearance to-day. A soft chancre or chancroid contracted two or three days ago, makes its appearance to-day. The inoculations of both poisons take place at the one and same spot, the result is a mixed chancre; or if two sores appear the origin of one may be syphilitic, the other chancroidal. It is therefore difficult, if not impossible, in many cases to determine the character of the disease from the period of incubation or from the appearance or local characteristics of the chancre. A mixed chancre is a syphilitic chancre (a hard chancre), while its appearance may be precisely like that of the soft chancre or chancroid. The only safe plan is to regard all venereal sores as suspicious. But while this is true, treatment for syphilis should not be commenced before the appearance of secondary symptoms, for unless such symptoms appear it is impossible to determine that syphilis really exists in any case. The mixed chancre, as already stated, is essentially a syphilitic chancre, and the beginning of...

The need for medical care has been a constant since the day the first merchant ship sailed centuries ago. Concern for the health of merchant mariners has, from the beginning, been a part of our nation's history. In the 1700's, legislation mandated that a Medicine Chest be carried on each American Flag vessel of more than 150 tons, provided it had a crew of ten or more. By 1798, a loose network of marine hospitals, mainly in port cities, was established by Congress to care for sick and disabled American merchant seamen. Called the Marine Hospital Service, later the Public Health and Marine Hospital Service, and finally the Public Health Service, these federal entities continued to provide healthcare to merchant seamen until 1981. The Ship's Medicine Chest and Medical Aid at Sea has been a part of much of this maritime history. This edition has evolved through many previous editions. The Public Health Service published the first Medicine Chest in 1881 under the title, Handbook for the Ship's Medicine Chest.

*The Ship's Medicine Chest and First Aid at Sea* U. S. Public Health Service 2017-10-22 Excerpt from The Ship's Medicine Chest and First Aid at Sea: Compiled and Edited by Medical Officers of the United States Public Health Service I would urge upon ship's officers a study of this book, especially of the chapter on hygiene and sanitation on shipboard. A sick man on board ship not only weakens the crew but may be a danger to the health of others. Care in the selection of the ship's company and the preservation of its health are measures of insurance against dis ease, death, and quarantine delays. Nothing which affects the well being of the sailor is trivial; and medical officers of the United States Public Health Service are always ready to advise ship's officers how to protect the health of crews. In the interests of both ship and crew and to the end that suffering may be prevented and human life at sea made more safe, this book has been written. **The Ship's Medicine Chest and First Aid at Sea** United States. Public Health Service 1955

The Ship's Medicine Chest and Medical Aid at Sea U. S. Public Health Service 2001 The Ships Medicine Chest and Medical Aid at Sea is published primarily for the information and guidance of the Master and other licensed and certified crew members who may be directly or indirectly responsible for the administration of medical treatment at sea on vessels which do not carry a physician. This book attempts to describe in nontechnical language, the diseases and medical emergencies most commonly encountered while at sea and the "first aid" and "follow-up" care required until the patient can be evaluated and treated by a physician. It must be emphasized that the care and treatment of a patient at sea is much different than while ashore. The medications and treatments suggested in this book are based on the fact that a physician is not physically available and that such treatment must be carried out by intelligent seamen and ships officers who have received training in the delivery of health care. It is used on fishing vessels, by outdoorsmen, explorers, and backwoodsmen as a guide when professional medical care is not available.

Health Organization 2011-01-19 This e-book package contains a copy of International Medical Guide for Ships Third edition and a copy of the Quantification Addendum which contains recommended quantities indications and dosing for 55 medicines listed in the International Medical Guide for Ships 3rd edition. The third edition of the International Medical Guide for Ships shows designated first-aid providers how to diagnose treat and prevent the health problems of seafarers on board ship. Since its first publication in 1967 the International Medical Guide for Ships has been a standard reference for medical care on board ships. The second edition written in 1988 was translated into more than 30 languages and has been used in tens of thousands of ships. This the third edition contains fully updated recommendations aimed to promote and protect the health of seafarers and is consistent with the latest revisions of both the WHO Model List of Essential Medicines and the International Health Regulations. The International Labour Organization's Maritime Labour Convention 2006 stipulates that all ships shall carry a medicine chest medical equipment and a medical guide. The International Medical Guide for Ships supports a main principal of that convention; to ensure that seafarers are given health protection and medical care as comparable as possible to that which is generally available to workers ashore. By carrying this guide on board ships and following its instructions countries can both fulfill their obligations under the terms of the Maritime Labour Convention 2006 and ensure the best possible health outcomes for their seafaring population. The Quantification Addendum contains recommended quantities indications and dosing for 55 medicines listed in the International Medical Guide for Ships 3rd edition. The quantities are based on three types of ships: . ocean-going ships with crews of 25-40 and no doctor (Category A); . coastal ships with crews of up to 25 that travel no more than 24 hours from a port of call (Category B); and . small boats and private craft with crews of 15 or less and usually travelling no more than a few hours from a port of call (Category C). These quantities have been updated to reflect the decrease of crew numbers on most ships and calculated for voyages of one month. This companion volume to the International Medical Guide for Ships provides essential guidance to all those who involved in the procurement purchasing stock maintenance and use of medicines to promote and protect the health of seafarers worldwide.
