**All About Process** Kim Grant 2017-02-28 In recent years, many prominent and successful artists have claimed that their primary concern is not the artwork they produce but the artistic process itself. In this volume, Kim Grant analyzes this idea and traces its historical roots, showing how changing concepts of artistic process have played a dominant role in the development of modern and contemporary art. This astute account of the ways in which process has been understood and addressed examines

canonical artists such as Monet, Cézanne, Matisse, and De Kooning, as well as philosophers and art theorists such as Henri Focillon, R. G. Collingwood, and John Dewey. Placing "process art" within a larger historical context, Grant looks at the changing relations of the artist's labor to traditional craftsmanship and industrial production, the status of art as a commodity, the increasing importance of the body and materiality in art making, and the nature and significance of the artist's role in modern society. In doing so, she shows how process is an intrinsic part of aesthetic theory that connects to important contemporary debates about work, craft, and labor. Comprehensive and insightful, this synthetic study of process in modern and contemporary art reveals how artists' explicit engagement with the concept fits into a broader narrative of the significance of art in the industrial and postindustrial world.

Art, Craft, and Theology in Fourth-Century Christian Authors Morwenna Ludlow 2020-09-29 Ancient authors commonly compared writing with painting. The sculpting of the soul was also a common philosophical theme. Art, Craft, and Theology in Fourth-Century Christian Authors takes its starting-point from such figures to recover a sense of ancient authorship as craft. The ancient concept of craft (ars, techne) spans 'high' or 'fine' art and practical or applied arts. It unites the beautiful and the useful. It includes both skills or practices (like medicine and music) and productive arts like painting, sculpting and the composition of texts. By using craft as a guiding concept for understanding fourth Christian authorship, this book recovers a sense of them engaged in a shared practice which is both beautiful and theologically useful, which shapes souls but which is also engaged in the production of texts. It focuses on Greek writers, especially the Cappadocians (Basil of Caesarea, Gregory of Nazianzus, and Gregory of Nysa) and John Chrysostom, all of whom were trained in rhetoric. Through a detailed examination of their use of two particular literary techniques—ekphrasis and prosōpopoeia—it shows how they adapt and experiment with them, in order to make theological arguments and in order to evoke a response from their readership.

**Screenwriting Fundamentals** Irv Bauer 2016-11-03 Screenwriting Fundamentals: The Art and Craft of Visual Writing takes a step-by-step approach to screenwriting, starting with a blank page and working through each element of the craft. Written in an approachable anecdote-infused style that's full of humor, Bauer shows the writer how to put the pieces together, taking the process of screenwriting out of the cerebral and on to the page. Part One of the book covers character, location, time-frame and dialogue, emphasizing the particularity in writing for a visual medium. Part Two of the book focuses on the narrative aspect of screenwriting. Proceeding incrementally from the idea and story outline, through plotting and writing the treatment, the workshop-in-a-book concludes with writing the First Draft. A unique emphasis on the visual elements of storytelling because the camera is always present—the screenplay must act as a guide for the director and the editor. A "workshop in a book" approach that walks the reader step-by-step through a screenplay—focusing on character, location, time frame, visual components, and

transitions—with plenty of exercises that generate material for the narrative writing process. A process-oriented approach, combined with a lighthearted tone and approachable style, that allows the reader to ease into the daunting task of writing a First Draft and takes them all the way through to the end— First Draft in hand.

Nick Montfort 2014-08-29 A single line of code offers a way to understand the cultural context of computing. This book takes a single line of code—the extremely concise BASIC program for the Commodore 64 inscribed in the title—and uses it as a lens through which to consider the phenomenon of creative computing and the way computer programs exist in culture. The authors of this collaboratively written book treat code not as merely functional but as a text—in the case of 10 PRINT, a text that appeared in many different printed sources—that yields a story about its making, its purpose, its assumptions, and more. They consider randomness and regularity in computing and art, the maze in culture, the popular BASIC programming language, and the highly influential Commodore 64 computer.

**The Craft of Scientific Presentations** Michael Alley 2006-05-17 This timely and hugely practical work provides a score of examples from contemporary and historical scientific presentations to show clearly what makes an oral presentation effective. It considers presentations made to persuade an audience to adopt some course of action (such as funding a proposal) as well as presentations made to communicate information, and it considers these

from four perspectives: speech, structure, visual aids, and delivery. It also discusses computer-based projections and slide shows as well as overhead projections. In particular, it looks at ways of organizing graphics and text in projected images and of using layout and design to present the information efficiently and effectively.
