*Pulver und Schüttgüter* Dietmar Schulze 2019-07-23 Erfahren Sie in diesem Buch alles über die Eigenschaften von Pulvern und Schüttgütern sowie deren Anwendung in der Praxis Das theoretische Wissen um das Verhalten von Pulvern und Schüttgütern ist im Ingenieurwesen mittlerweile weit verbreitet. Beim Blick in die Praxis – speziell bei der Schüttgutlagerung in Silos – fehlt es jedoch nach wie vor an Vertrauen in diese Methode. Das möchte Dietmar Schulze mit diesem Buch über Pulver und Schüttgüter ein für alle Mal ändern. In seinem Buch erläutert er daher die Fließeigenschaften und -fähigkeiten dieser Komponenten und zeigt, wie dieses Wissen in die Gestaltung von Anlagenteilen wie Trichtern oder Silos praktisch angewendet werden kann. Anhand von Berechnungsaufgaben mit Lösungen können Sie Ihren aktuellen Wissensstand prüfen und erweitern. Von der Theorie zur Gestaltung

von Schüttgutbehältern Schulze hat sein Buch über Pulver und Schüttgüter in zwei Bereiche aufgeteilt. In drei Kapiteln erörtert er die theoretischen Grundlagen zum Umgang mit Schüttgütern im Ingenieurwesen. Hier lernen Sie alles über: • Wechselwirkungen zwischen Partikeln • Fließeigenschaften und deren Messung • Einflüsse auf das Fließverhalten (z.B. Feuchtigkeit, Zeit, Fließhilfsmittelgehalt) Nach diesem theoretischen Grundlagen-Exkurs wendet sich der Autor der Schüttguttechnik in der Praxis zu. Schulze erläutert, wie Sie die gemessenen Fließeigenschaften zur funktionsgerechten Gestaltung von Schüttgutbehältern wie Silos und Trichtern anwenden können. Zudem bekommen Sie einen Einblick in apparative Aspekte sowie das praktische Messen von Fließeigenschaften – insbesondere mit Hilfe von Schergeräten. Die vierte, ergänzte Auflage – ideal für Neueinsteiger Abschließend befasst sich dieses Buch mit der verfahrenstechnischen Siloauslegung. Hier widmet sich der Autor Aspekten wie der Silogestaltung, dem Schüttgutaustrag, der Entmischung sowie dem Phänomen von Erschütterungen und Schwingungen in Silos. Für die vierte Auflage wurden in mehreren Kapiteln Ergänzungen vorgenommen, u.a. bei der Entmischung zur Probenahme und zur Bewertung der Mischungsqualität mittels statistischer Methoden, und bei der Siloauslegung mit weiteren Berechnungsdiagrammen.

**Dry Scrubbing Technologies for Flue Gas Desulfurization** Barbara Toole-O'Neil 2012-12-06 Dry sulfurization processes offer the significant advantages of low capital and low operating costs when compared to wet desulfurization. They hold great potential for the economical reduction of sulfur emissions from power utilities that use high-sulfur coal. Dry Scrubbing Technologies for Flue Gas Desulfurization represents a body of research that was sponsored by the State of Ohio's Coal Development Office for the development of technologies that use coal in an economic, environmentally-sound manner. One of the project's major goals was the development of dry, calcium-based sorption processes for removing sulfur dioxide from the combustion gases produced by high-sulfur coal. Dry Scrubbing Technologies for Flue Gas Desulfurization highlights a number of fundamental research findings that have had a significant and lasting impact in terms of scientific understanding. For example, the experimental investigation of the upper-furnace sulfur capture obtained time-resolved kinetic data in less than 100 millisecond time-scales for the first time ever, thereby revealing the true nature of the ultra-fast and overlapping phenomena. This was accomplished through the development of a unique entrained flow reactor system. The authors also identify a number of important areas for future research, including reaction mechanisms, sorbent material, transport effects, modeling, and process development. Dry Scrubbing Technologies for Flue Gas Desulfurization will appeal to both chemical and environmental engineers who examine different ways touse coal in a more environmentally benign manner. It will make an

essential reference for air pollution control researchers from coal, lime, cement, and utility industries; for government policy-makers and environmental regulatory agencies; and for those who teach graduate courses in environmental issues, pollution control technologies, and environmental policy.
