Redefinitions of the artist, artwork, and spectator link beauty and artistic efficacy to arrive at a set of principles for assessment that demand that contemporary lighting design surpass utilitarian visibility to become a vital part of the total artwork that is a theatrical production. Inspired by the movements of the broader art and design worlds of the mid-19th century through present day—citing influences as diverse as Jennifer Tipton, Lois Tyson, Dieter Rams, and Dave Hickey—this book charts a course from the artistic team’s dramaturgical work to a solo studio concept to the tech table. Engaging and wide-ranging, *Towards Good Lighting for the Stage* synthesizes years of cross-disciplinary research and case studies of the author’s own work into provocative reading for practitioners of lighting design, advanced students, and academics, as well as those interested in connecting theatrical practice, aesthetic theory, and visual art.

The Art of Light on Stage

Yaron Abulafia 2015-07-16 The Art of Light on Stage is the first history of theatre lighting design to bring the story right up to date. In this extraordinary volume, award-winning designer Yaron Abulafia explores the poetics of light, charting the evolution of lighting design against the background of contemporary performance. The book looks at the material and the conceptual; the technological and the transcendental. Never before has theatre design been so vividly and excitingly illuminated. The book examines the evolution of lighting design in contemporary theatre through an exploration of two fundamental issues: 1. What gave rise to the new directions in lighting design in

contemporary theatre? 2. How can these new directions be viewed within the context of lighting design history? The study then focuses on the phenomenological and semiotic aspects of the medium for light - the role of light as a performer, as the medium of visual perception and as a stimulus for imaginative representations - in selected contemporary theatre productions by Robert Wilson, Romeo Castellucci, Heiner Goebbels, Jossi Wieler and David Zinder. This groundbreaking book will be required reading for anyone concerned with the future of performance.

Stage Lighting Richard E. Dunham 2015-10-30 The book's organization follows a layered approach that builds on basic principles: Light as a Medium (Part 1), Tools of a Lighting Designer (Part 2), Design Fundamentals (Part 3), and Lighting Applications (Part 4). This presents students with a practical and logical sequence when learning basic concepts. The full spectrum of the lighting design process is

presented in detail, giving students an example of how one might develop a lighting design from script analysis through concept and plot development, and all the way to an opening. This detailed process with a step-by-step design approach gives students a plan to work from, which they can later modify as they mature and gain confidence as designers. The text contains a more comprehensive discussion of basic technology, light as a physical phenomena, and methodology of designs than is found in most introductory texts, bridging the gap between introductory and advanced lighting courses. The text will appeal to theatrical designers who want to venture into areas of lighting like architectural or virtual lighting design, while at the same time gaining a solid grounding in the fundamentals of lighting design. Lighting Design will also benefit illuminating engineers who want to move away from mere computational approaches in lighting and on to explore techniques along the

design approaches of theatrical lighting design. The final 9 chapters cover many specialty areas of lighting design, highlighting the unique and shared qualities that exist between the different aspects of these elements. Discussions involve traditional entertainment areas like theatre, as well as lesser known facets of the industry including film/video, landscape lighting, retail/museum lighting, virtual lighting, concert, spectacle performances, and architectural lighting. Models of design tasks demonstrate the actual use and development of plots/sections, schedules, photometrics tables, and cut sheets, rather than simply talking about what they are. This hands-on approach provides students with a firm understanding of how to actually use these tools and processes.
