Each Wild Idea Geoffrey Batchen 2002-02-22 Essays on photography and the medium's history and evolving identity. In *Each Wild Idea*, Geoffrey Batchen explores a wide range of photographic subjects, from the timing of the medium's invention to the various implications of cyberculture. Along the way, he reflects on contemporary art photography, the role of the vernacular in photography's history, and the Australianness of Australian photography. The essays all focus on a consideration of specific photographs—from a humble combination of baby photos and bronzed booties to a masterwork by Alfred Stieglitz. Although Batchen views each photograph within the context of broader social and political forces, he also engages its own distinctive formal attributes. In short, he sees photography as something that is simultaneously material and cultural. In an effort to evoke the lived experience of history, he frequently relies on sheer description as the mode of analysis, insisting that we look right at—rather than beyond—the photograph being discussed. A constant theme throughout the book is the question of photography's past, present, and future identity.

Blown to Bits Harold Abelson 2008 'Blown to Bits' is about how the digital explosion is changing everything. The text explains the technology, why it creates so many surprises and why things often don't work the way we expect them to. It is also about things the information explosion is destroying: old assumptions about who is really in control of our lives.

The Elusive Quest for Growth William R. Easterly 2002-08-02 Why economists' attempts to help poorer countries improve their economic well-being have failed. Since the end of World War II, economists have tried to figure out how poor countries in the tropics could attain standards of living approaching those of countries in Europe and North America. Attempted remedies have included providing foreign aid, investing in machines, fostering education, controlling population growth, and making aid loans as well as forgiving those loans on condition of reforms. None of these solutions has delivered as promised. The problem is not the failure of economics, William Easterly argues, but the failure to apply economic principles to practical policy work. In this book Easterly shows how these solutions all violate the basic principle of economics, that people—private individuals and businesses, government officials, even aid donors—respond to incentives. Easterly first discusses

the importance of growth. He then analyzes the development solutions that have failed. Finally, he suggests alternative approaches to the problem. Written in an accessible, at times irreverent, style, Easterly's book combines modern growth theory with anecdotes from his fieldwork for the World Bank.

The Sciences of the Artificial, third edition Herbert A. Simon 1996-09-26 Continuing his exploration of the organization of complexity and the science of design, this new edition of Herbert Simon's classic work on artificial intelligence adds a chapter that sorts out the current themes and tools—chaos, adaptive systems, genetic algorithms—for analyzing complexity and complex systems. There are updates throughout the book as well. These take into account important advances in cognitive psychology and the science of design while confirming and extending the book's basic thesis: that a physical symbol system has the necessary and sufficient means for intelligent action. The chapter "Economic Reality" has also been revised to reflect a change in emphasis in Simon's thinking about the respective roles of organizations and markets in economic systems.

Jan Brueghel the Elder Arianne Faber Kolb 2005 Kolb has produced a thoroughly researched essay on this painting, which is in the Getty Museum. The study focuses on Brueghel's depiction of nature, especially his exacting representation of identifiable species of animals and birds, the names of which are listed. Brueghel's collaboration with other painters, his and other painters' re-use of the same theme and composition, and the history and practice of natural history collection

and representation are central themes. The volume, which is printed in a horizontal format (it's 11x8") and heavily illustrated, is written for a general audience, though art historians will also find much of interest.

Good-Bye Yoshihiro Tatsumi 2012-04-10 Drawn in 1971 and 1972, these stories expand Yoshihiro Tatsumi's prolific artist's vocabulary for characters contextualized by themes of depravity and disorientation in twentieth-century Japan. Some of the tales focus on the devastation the country felt as a result of World War II: in one story a man devotes twenty years to preserving the memory of those killed at Hiroshima, only to discover a horrible misconception at the heart of his tribute. Yet, while American influence does play a role in the disturbing and bizarre stories contained within this volume, as always it is Tatsumi's characters that bear his hallmark, muddling through isolated despair and fleeting pleasure to live out their darkly nuanced lives.

Ant Colony Optimization Marco Dorigo 2004-06-04 An overview of the rapidly growing field of ant colony optimization that describes theoretical findings, the major algorithms, and current applications. The complex social behaviors of ants have been much studied by science, and computer scientists are now finding that these behavior patterns can provide models for solving difficult combinatorial optimization problems. The attempt to develop algorithms inspired by one aspect of ant behavior, the ability to find what computer scientists would call shortest paths, has become the field of ant colony optimization (ACO), the most successful and widely recognized algorithmic technique based on ant behavior. This book presents an overview of this rapidly growing field, from its theoretical inception to practical applications, including descriptions of many available ACO algorithms and their uses. The book first describes the translation of observed ant behavior into working optimization algorithms. The ant colony metaheuristic is then introduced and viewed in the general context of combinatorial optimization. This is followed by a detailed description and guide to all major ACO algorithms and a report on current theoretical findings. The book surveys ACO applications now in use, including routing, assignment, scheduling, subset, machine learning, and bioinformatics problems. AntNet, an ACO algorithm designed for the network routing problem, is described in detail. The authors conclude by summarizing the progress in the field and outlining future research directions. Each chapter ends with bibliographic material, bullet points setting out important ideas covered in the chapter, and exercises. Ant Colony Optimization will be of interest to academic and industry researchers, graduate students, and practitioners who wish to learn how to implement ACO algorithms.

Poetree Shauna LaVoy Reynolds 2019-03-19 A girl writes a poem to a tree, but then is surprised when the tree writes back in this wondrous and warm picture book about friendship, nature, and the power of poetry. The snow has melted, the buttercups are blooming, and Sylvia celebrates winter's end by writing a poem. She ties her poem to a birch tree, hoping that it doesn't count as littering if it makes the world more beautiful. But when she returns, a new poem is waiting for her. Could the tree really be writing back? Sylvia decides to test her theory, and so begins a heartwarming poetic correspondence...as well as an unexpected new friendship. Lyrical and sweetly satisfying, Poetree is about finding beauty in the world around you, and new friends in unlikely places.

The Young Vermeer Edwin Buijsen 2010 Johannes Vermeer (1632-1675) is world-famous for his scenes of daily life, such as a kitchen maid pouring milk, a woman having a music lesson, or a lady writing a letter.

However, when Vermeer began painting around the age of 21, he focused primarily on traditional subjects derived from the Bible and classical mythology. Not only do these early works differ greatly from his later paintings in terms of subject matter, they also differ in style. The exhibition unites three paintings from the beginning of Vermeer's artistic career: the Mauritshuis' Diana and her nymphs of c. 1653-1654, is joined by Christ in the house of Martha and Mary (c. 1655) from the National Gallery of Scotland in Edinburgh, and The Procuress (1656) from the Staatliche Kunstsammlungen in Dresden. These three paintings afford an image of the artist seeking his own style. All three paintings have recently been restored."

European Drawings 2 George R. Goldner 1992-10-08 The Getty Museum's collection of drawings was begun in 1981 with the purchase of a Rembrandt nude and has since become an important repository of European works from the fifteenth through the nineteenth century. As in the first volume devoted to the collection (published in 1988 in English and Italian editions), the text is here organized first by national school, then alphabetically by artist, with individual works arranged chronologically. For each drawing, the authors provide a discussion of the work's style, dating, iconography, and relationship to other works, as well as provenance and a complete bibliography.
