Property, Power and the Growth of Towns

Catherine Casson 2023-05-05 Local enterprise, institutional quality and strategic location were of central importance in the growth of medieval towns. This book, comprising a study of 112 English towns, emphasises these key factors. Downstream locations on major rivers attracted international trade, and thereby stimulated the local processing of imports and exports, while the early establishment of richly endowed religious institutions funnelled agricultural rental income into a town, where it was spent on luxury goods produced by local craftsmen and artisans, and on expensive, long-running building schemes. Local entrepreneurs who recognised the economic potential of a town developed residential suburbs which attracted wealthy residents. Meanwhile town authorities invested in the building and maintenance of bridges, gates, walls and ditches, often with financial support from wealthy residents. Royal lordship was also an advantage to a town, as it gave the town authorities direct access to the king and bypassed local power-brokers such as bishops and earls. The legacy of medieval investment remains visible today in the streets of important towns. Drawing on rentals, deeds and surveys, this book also examines in detail the topography of seven key medieval towns: Bristol, Gloucester, Coventry, Cambridge, Birmingham, Shrewsbury and Hull. In each case, surviving records identify the location and value of urban properties, and their owners and tenants. Using statistical techniques, previously applied only to the early modern and modern periods, the book analyses the impact of location and type of property on property values. It shows that features of the modern property market, including spatial autocorrelation, were present in the middle ages. Property hot-spots of high rents are also identified; the most valuable properties were those situated between the market and other focal points such transport hubs and religious centres, convenient for both, but remote from noise and pollution. This book

takes an interdisciplinary approach, drawing on expertise from the disciplines of economics and history. It will be of interest to historians and to social scientists looking for a long-run perspective on urban development.

Sources for English Local History W. B.

Stephens 1981-09-10 English local and regional history has attracted widespread attention in the last twenty-five to thirty years. Its study has expanded at undergraduate and postgraduate levels in universities, polytechnics, and at other institutions of higher education, and it has long retained its popularity as a subject for adult education classes. In schools the teaching of local history in its own right, and as an ingredient of general history, environmental studies, and local and social studies, is well established, and commonly involves the use of original sources. The expansion of genealogical studies into the wider area of family history has involved many individuals and groups in the investigation of the local conditions, which existed where former generations lived and, in this pursuit, increasing use of local records has been made. Many who seek to involve themselves in this work, however, find that they are ill-equipped in the knowledge of what sources exist, where they are to be found, or what techniques are suitable in making the best use of them.

Reference Services Review 1973

Lords and Towns in Medieval Europe

Howard B. Clarke 2017-07-14 This volume is based on possibly the biggest single Europe-wide project in urban history. In 1955 the International Commission for the History of Towns established the European historic towns atlas project in accordance with a common scheme in order to encourage comparative urban studies. Although advances in urban archaeology since the 1960s have highlighted the problematic relationship between the oldest extant town plan and the actual origins of a town, the large-scale cadastral maps as they have been made available by the European historic towns atlas project are still necessary if we want to understand the evolution of the

physical form of our towns. By 2014 the project consisted of over 500 individual publications from over 18 different countries across Europe. Each atlas comprises at least a core-map at the scale of 1:2500, analytical maps and an explanatory text. The time has come to use this enormous database that has been compiled over the last 40 years. This volume, itself based on a conference related to this topic that was held in the Royal Irish Academy in Dublin in 2006, takes up this challenge. The focus of the volume is on the question of how seigneurial power influenced the creation of towns in medieval Europe and of how this process in turn influenced urban form. Part I of the volume addresses two major issues: the history of the use of town plans in urban research and the methodological challenges of comparative urban history. Parts II and III constitute the core of the book focusing on the dynamic relationship between lordship and town planning in the core area of medieval Europe and on the periphery. In Part IV the symbolic meaning of town plans for medieval people is discussed. Part V consists of critical contributions by an archaeologist, an art historian and an historical geographer. By presenting case studies by leading researchers from different European countries, this volume combines findings that were hitherto not available in English. A comparison of the English and German bibliographies, attached to this volume, reveals some interesting insights as to how the focus of research shifted over time. The book also shows how work on urban topography integrates the approaches of the historian, archaeologist and historical geographer. The narrative of medieval urbanization becomes enriched and the volume is a genuine contribution to European studies.

Credit and Trade in Later Medieval England, 1353-1532

Richard Goddard 2016-06-21 This book challenges the notion that economic crises are modern phenomena through its exploration of the tumultuous 'credit-crunch' of the later Middle Ages. It illustrates clearly how influences such as the Black Death, inter-European warfare, climate change and a bullion famine occasioned severe and prolonged economic decline across fifteenth century England. Early chapters discuss trends in lending and borrowing, and the use of credit to fund domestic trade through detailed analysis of the Statute Staple and rich primary sources. The author then adopts a broad-based geographic lens to examine provincial credit before focusing on London's development as the commercial powerhouse in late medieval business.

Academics and students of modern economic change and historic financial revolutions alike will see that the years from 1353 to 1532 encompassed immense upheaval and change, reminiscent of modern recessions. The author carefully guides the reader to see that these shifts are the precursors of economic change in the early modern period, laying the foundations for the financial world as we know it today.
