Atlas of Upper Extremity Trauma W. Andrew Eglseder 2017-12-22

Demonstrating current management techniques for traumatic fractures and dislocations of the upper extremity, this atlas utilizes a practical, how-to structure, discussing philosophy, approach, patient positioning, prepping, draping, and surgical techniques for each type of injury. Generously illustrated with intraoperative photos, the chapters of this atlas are arranged by anatomic location, from the clavicle and shoulder down to the fingers, with each chapter briefly describing the thought processes involved in choosing surgical interventions and applied anatomy approaches, fixation selections, and techniques. Actual case examples, cadaver photos and plentiful radiographs illustrate the text for a strongly visual presentation, and a list of "Eglsederisms" - pithy bits of advice for residents and veteran surgeons alike - set the stage for a highly demonstrative resource for orthopedic and trauma surgeons, residents and fellows.

The Experience of the US Marine Corps' Surgical Shock Trauma Platoon with 417 Operative Combat Casualties During a 12 Month Period of Operation Iraqi Freedom 2006 The Forward Resuscitative Surgical System (FRSS) is a small, mobile trauma surgical unit designed to support modern U.S. Marine Corps combat operations. The experience of two co-located FRSS teams during 1 year of service in Operation Iraqi Freedom is reviewed to evaluate the system's efficacy. Between March 1, 2004 and February 28, 2005, two FRSS teams and a shock trauma platoon were co-located in a unit designated the Surgical Shock Trauma Platoon (SSTP). Data concerning patient care before and during treatment at the SSTP was maintained prospectively. Prospective determination of outcomes was obtained by e-mail correspondence with surgeons caring for the patients at higher echelons. The Los Angeles County medical center (LAC) trauma registry was queried to obtain a comparable database with which to compare outcomes. During the year reviewed there were 895 trauma admissions to the SSTP. Excluding 25 patients pulseless on arrival and 291 minimally injured patients, 559 of 579 (97%) combat casualties survived; 417 casualties underwent 981 operative procedures in the two SSTP operating shelters. There were 79 operative patients with a mean injury severity score of 26 (range, 16-59) and mean revised trauma score of 6.963 (range, 4.21-7.841) who had sustained severe injuries. Ten (12.7%) of these casualties died while 43 of 337 (12.8%) deaths were seen with comparable cases treated at LAC. The authors conclude that small task-oriented surgical units are capable of providing effective trauma surgical care to combat casualties. Further experience is needed to better delineate the balance between early, forward-based surgical intervention and more prolonged initial casualty evacuation to reach more robust surgical facilities.

Trauma Induced Coagulopathy Hunter B. Moore 2020-10-12 The first edition of this publication was aimed at defining the current concepts of trauma induced coagulopathy by critically analyzing the most up-to-date studies from a clinical and basic science perspective. It served as a reference source for any clinician interested in reviewing the pathophysiology, diagnosis, and management of the coagulopathic trauma patient, and the data that supports it. By meticulously describing the methodology of most traditional as well as state of the art coagulation assays the reader is provided with a full understanding of the tests that are used to study trauma induced coagulopathy. With the growing interest in understanding and managing coagulation in trauma, this second edition has been expanded to 46 chapters from its original 35 to incorporate the massive global efforts in understanding, diagnosing, and treating trauma induced coagulopathy. The evolving use of blood products as well as recently introduced hemostatic medications is reviewed in detail. The text provides therapeutic strategies to treat specific coagulation abnormalities following severe injury, which goes beyond the first edition that largely was based on describing the mechanisms causing coagulation abnormalities. Trauma Induced Coagulopathy 2nd Edition is a valuable reference to clinicians that are faced with specific clinical challenges when managing coagulopathy.

Culture Shock, Trauma, Exile & Nostalgia in Iranian-American Memoirs Carmen Reza 2012 As many individuals throughout the world, from varying backgrounds move for different reasons, whether it be economic and educational necessity or as a refugee or exile, to many countries of the West, most notably the United States, the phenomenon of culture shock, assimilation, exilic status, and trauma is becoming ever more prevalent in Western societies, a growing interest and necessity of this type of study is becoming ever more important. This book discusses the concepts of exile, trauma, and nostalgia and explains how they all come together to create a sense of culture shock for four influential and quintessential Iranian-American women; women who exemplify, in many cases, the experiences of a number of Iranian exiles. Azar Nafisi, Nahid Rachlin, Tara Bahrapour, and Azadeh Moaveni, despite their different life experiences and ages, all encountered culture shock as it related to male-female relations, Iranian gender norms and issues of sex and sexuality and treatments and views of the female body as it relates to reproduction. With the current state of affairs, it is important to study and understand many of these important issues, especially as it relates to immigration.

Shock Waves Cynthia Orange 2010-08-10 A user-friendly guide to helping a loved one with post-traumatic stress disorder--while taking care of yourself. In the United States, about 60 percent of men and 50 percent of women experience, witness, or are affected by a traumatic event in their lifetimes. Many of them (8 percent of men and 20 percent of women) may develop post-traumatic stress disorder (PTSD)--a life-altering anxiety disorder. Once connected mainly with veterans of war, PTSD is now being diagnosed in many situations that cause extreme trauma such as rape, physical attacks or abuse, accidents, terrorist incidents, or natural disasters. The millions of family members of those who have PTSD also suffer, not knowing how to help their loved one recover from the pain.Shock Waves is a practical, user-friendly guide for those who love someone suffering from this often debilitating anxiety disorder, whether that person is a survivor of war or of another harrowing situation or event. Through her own experience, extensive research, advice from mental health professionals, and interviews with those working through PTSD and their families, Cynthia Orange shows readers how to identify what PTSD symptoms look like in real life, respond to substance abuse and other co-occurring disorders, manage their reactions to a loved one's violence and rage, find effective professional help, and prevent their children from experiencing secondary trauma.Each section of Shock Waves includes questions and exercises to help readers incorporate the book's lessons into their daily lives and interactions with their traumatized loved ones
