To Improve Health and Health Care Stephen L. Isaacs 2010-11-01

Praise for previous volumes of To Improve Health and Health Care: "The particular strength of the book is the critical nature of the articles. These are not glossy renditions of the good deeds of the foundation; rather they examine in depth both what went right and what went wrong with the projects the foundation sponsored. Anyone with an interest in improving health care in America will want to know what can be done, and perhaps even more importantly, what cannot be done even by an independent institution with substantial resources to invest in new ideas." -- Jeremy Holtzman, MD MS, University of Minnesota Medical School, Doody Publishing (2002). "This is a useful guide to both the grant seeker and the planner of similar projects who address health and healthcare needs in communities." -- Ann H. Cary, PhD, MPH, RN, George Mason University, (Doody Publishing, 1999.) Since 1972, The Robert Wood Johnson Foundation has been the nation's largest philanthropy devoted exclusively to health. To further its mission of improving the health and health care of all Americans, the Foundation strives to foster innovation, develop ideas, disseminate information, and enable committed people to devote their energies to improving the nation's well-being. As part of the Foundation's efforts to inform the public, To Improve Health and Health Care, the on-going anthology of The Robert Wood Johnson Foundation, provides an in-depth look into the programs it funds. Written for policy makers and practitioners, as well as interested members of the public, the series offers valuable lessons for leaders and educators developing plans for the coming years. This volume of the anthology covers Improving Quality of Care, Vulnerable Populations, Combating Substance Abuse, and other areas of concern

Grants Jean M. Fromm 2007 Grants are available from thousands of sources, both private and public. To the grantseeker, however, this wealth of sources appears like an impenetrable jungle. "Where are the grants I need and what do I need to do to submit my ideas and proposals?" This book is designed to answer these questions by aiming the grantseeker to both the grant givers and by providing a bibliography of book for further research.

Communities and Health Care Sarah F. Liebschutz 2011 During the 1992 presidential campaign, candidate William J. Clinton praised Rochester's hospital experimental payment (HEP) program for containing costs and providing access to high quality health care. "If Rochester, New York, can do it with two-thirds of the cost of the rest of us," Clinton asserted, "America can do it too." This book is a detailed case study of a community that devised and implemented a unique, successful, and celebrated hospital cost containment experiment in the 1980s. Author Sarah Liebschutz describes the economic and social culture of Rochester dating to the early part of the twentieth century that provided the fertile soil for regional health planning and the HEP program. This study also examines how the changing economy ultimately stimulated robust competition among health care insurers and providers. What does Rochester's experience tell us about the role communities play in organizing and financing health care? The national government has long played -- and will continue to play -- a central role in determining health policy, funding health insurance, and reimbursing health care providers. The responsibility for dealing with the interlocking issues of access, quality, and costs, however, is not exclusively national. State governments shape the health system as they legislate, regulate, and finance such key components of health care as insurance coverage, quality of care, hospitals, and other providers. Communities matter because they organize and deliver health care at the ground level through private and employed health care professionals and public, private, and nonprofit hospitals. They matter because they ultimately determine whether health care in America is available, efficient, and effective. The book draws heavily on files of the Rochester Area Hospitals Corporation, made available specifically to the author, and on extensive interviews with business leaders, hospital trustees, and administrators whose decisions fostered collaboration and then competition. Sarah F. Liebschutz is Distinguished Service Professor Emerita at the State University of New York, College at Brockport.

[The Foundation](#) Joel L. Fleishman 2007-01-09 Private foundations have been the dynamo of social change since their invention at the beginning of the last century. Yet just over 10 percent of the public knows they even exist; and for those who are aware of them, as well as even those who seek grants from them, their internal workings remain a complete mystery. Joel Fleishman knows the sector like few others, and in this groundbreaking book he explains both the history of foundations—with their fledgling beginnings in the era of the robber barons seeking social respectability—through to the present day. This book shows how, why foundations matter, and how the future of foundations can provide a vital spur to the engine of the American, and the world's, economy—if they are properly established and run.

To Improve Health and Health Care 1998-1999 Stephen L. Isaacs 1998-09-25 Working Today for Tomorrow's Health and Health Care Since 1972, The Robert Wood Johnson Foundation has been the nation's largest philanthropy devoted exclusively to health. To further its mission of improving the health and health care of all Americans, it provides funds for demonstration projects, educational and communications activities, policy analysis, and research. This book, the second volume in a new series, provides an in-depth look into the programs it funds. The cases

discussed in *To Improve Health and Health Care 1998-1999*, illustrate how the Foundation and its grantees have tackled some of today's key issues. Written for health care professionals and interested members of the public, the series will offer useful lessons for leaders and educators developing plans and policies for the next century.

To Improve Health and Health Care 1997 Stephen L. Isaacs 1997-07-03 At the Frontlines of Health Research Since 1972, The Robert Wood Johnson Foundation has been the nation's largest philanthropy devoted exclusively to health. The Foundation is dedicated to educating the public about health care innovation through findings from the projects it supports. This book, the first in a new series, offers you an in-depth look at programs funded by The Robert Wood Johnson Foundation. Written for health care professionals and interested members of the public, the series will provide useful lessons to leaders and educators as they develop plans and policies for the next century. The cases discussed here illustrate how the Foundation is tackling some of today's key health care issues, and focuses specifically on three areas of concern--access to care, changes in the health care system, and improving conditions for vulnerable groups. This volume focuses on: The media and managed care Medical malpractice Measuring access to care Programs for homeless families Immunization services for children Improving health policy at the state level Shaping the health care workforce Chronic care services Death and dying Physicians and the uninsured Sexual behavior and AIDS
[The Oxford Handbook of the Science of Science Communication](#) Kathleen Hall Jamieson 2017-05-17 The proposal to vaccinate adolescent girls against the human papilloma virus ignited political controversy, as did the advent of fracking and a host of other emerging technologies. These disputes attest to the persistent gap between expert and public perceptions. Complicating the communication of sound science and the debates that surround the societal applications of that science is a changing media environment in which misinformation can elicit belief without corrective context and likeminded individuals are prone to seek ideologically comforting information within their own self-constructed media enclaves. Drawing on the expertise of leading science communication scholars from six countries, *The Oxford Handbook of the Science of Science Communication* not only charts the media landscape - from news and entertainment to blogs and films - but also examines the powers and perils of human biases - from the disposition to seek confirming evidence to the inclination to overweight endpoints in a trend line. In the process, it draws together the best available social science on ways to communicate science while also minimizing the pernicious effects of human bias. The Handbook adds case studies exploring instances in which communication undercut or facilitated the access to scientific evidence. The range of topics addressed is wide, from genetically engineered organisms and nanotechnology to vaccination controversies and climate change. Also unique to this book is a focus on the complexities of involving the public in decision making about the uses of science, the regulations that should govern its application, and the ethical boundaries within which science should operate. The Handbook is an invaluable resource for researchers in the communication fields, particularly in science and health communication, as well as to scholars involved in research on scientific topics susceptible to distortion in partisan debate.

Casebook for The Foundation: A Great American Secret Joel L.

Fleishman 2009-03-25 Unique in all the world, the American foundation sector has been an engine of social change for more than a century. In this companion volume to *The Foundation: A Great American Secret*, Joel Fleishman, Scott Kohler, and Steven Schindler explore 100 of the highest-achieving foundation initiatives of all time. Based on a rich array of sources--from interviews with the principals themselves to contemporaneous news accounts to internal evaluation reports--this volume presents brief case studies of foundation success stories across virtually every field of human endeavor. The influence of the foundations on American, and indeed global society, has only occasionally come into the public view. For every well-known foundation achievement--Andrew Carnegie's massive library building program or the Robert Wood Johnson Foundation's public efforts to curb tobacco use--there are a great many lesser-known, but often equally important stories to be told. The cases in this volume provide a wealth of evidentiary support for Joel Fleishman's description of, and recommendations for, the foundation sector. With lessons for grant-makers, grant-seekers, public officials, and public-spirited individuals alike, this casebook pieces together 100 stories, some well known, others never before told, and offers hard proof of the foundation sector's immense and enduring impact on scientific research, education, public policy, and many other fields. The work that foundations have supported over the past century has achieved profound results. Yet foundations are capable of more and better. This volume, a window onto great successes of the past and present, is at once a look back, a look around, and a point of reference as we turn to the future.
